

Mobile Phone Radiation Protection
Why take the risk?

Who are we?

TEAM

A team with over 15 years experience of mobile phone design, industrial manufacturing and network design for the world's leading telecom companies

MISSION

Recent evidence confirms the potential damage from the radiation emitted by mobile phones on human health... we want to raise awareness and provide full protection

SCIENCE

Our finished product range is the only one on the market that has been tested by one of the world's largest health and safety certification organisation TÜV SÜD in UK

RESPONSIBLE

All our products are hand-made in Europe. We trade fairly and give back by connecting with people and projects that encourage sustainability and development.

Mobile Phone Radiation is a rising concern attracting more and more media coverage

The inconvenient truth about cancer and mobile phones

On 28 March this year, the [scientific peer review](#) of a landmark United States government study concluded that there is “clear evidence” that radiation from mobile phones causes cancer

Radiation exposure is increasing as people spend more and more time on their phone every day

- Mobile phones use electromagnetic radiation in the microwave range (450–3800 MHz and 24-80GHz in 5G mobile)
- Radiation exposure is increasing as there are nearly 50 million smartphone users in the UK³ with 47% spending more than 5 hours per day on their mobile phones⁴

³Source: <https://www.statista.com/statistics/553464/predicted-number-of-smartphone-users-in-the-united-kingdom-uk/>

⁴Source: <https://www.statista.com/statistics/781692/worldwide-daily-time-spent-on-smartphone/>

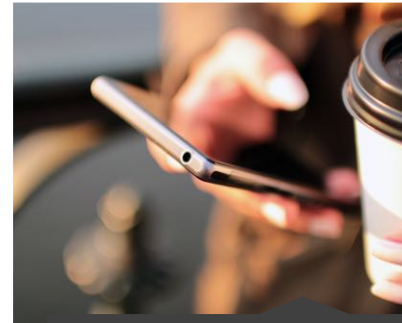

Currently, there are limited ways to reduce exposure to radio waves produced by mobile phones

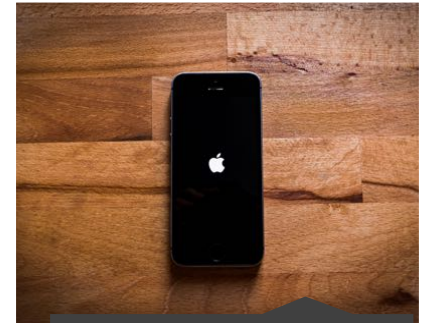

Avoid using the phone more than necessary

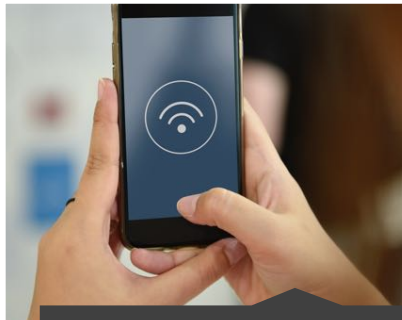

Use speakerphone or a hands free kit to keep the phone away from your body

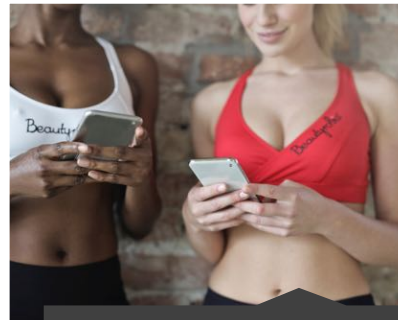

Text more

Do not sleep with your mobile phone powered on

Only use your mobile phone when the reception is strong

Avoid carrying your phone on your body at all times

Check the specific absorption rate (SAR) before buying the phone

Introducing QONY – a range of cases proven to protect users against radiation emitted by mobile phones

What makes QONY different?

- Patented* 3D antenna technology for shaping and redirection of antenna waves
- EU registered unique design
- Product tested by one of the world's largest health and safety organisations TÜV SÜD in UK using 3G and 4G equipment
- Up to 99.7% measured radiation reduction (factor 300)
- Hand-made in Italian fine leather by craftsmen in Europe
- Full year warranty
- Exclusive product with limited stock available

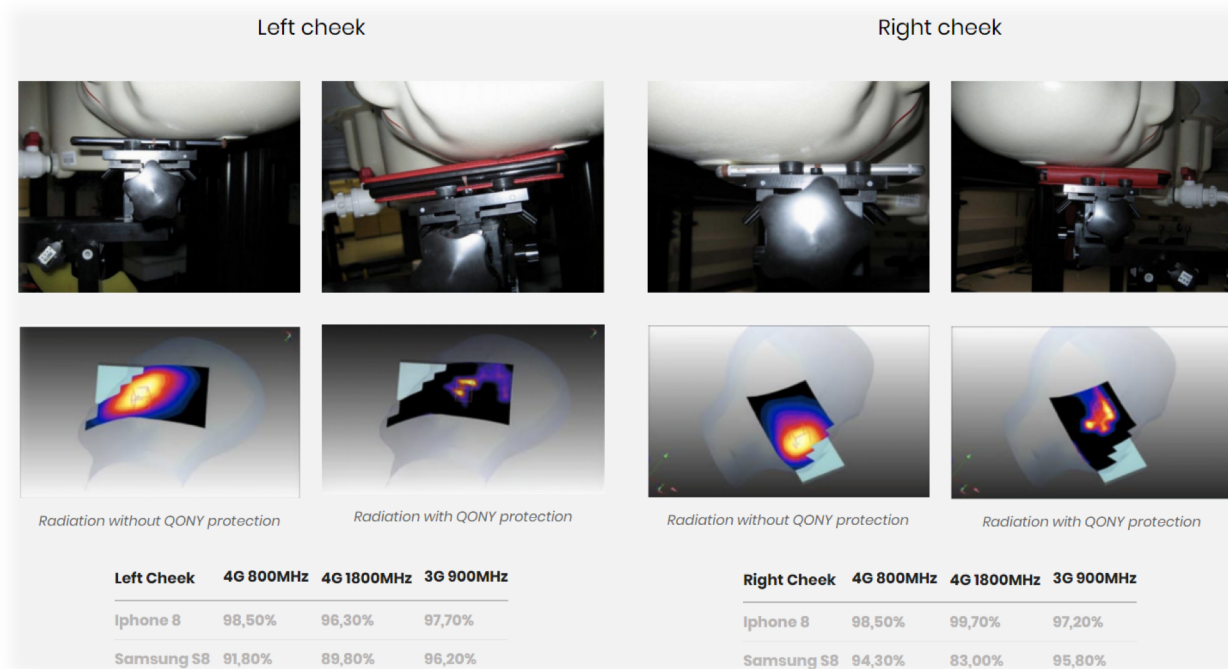

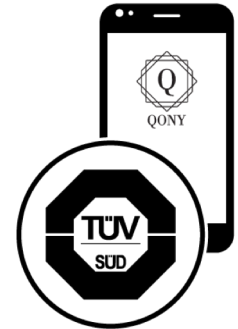

*Patent approval pending

Properly tested

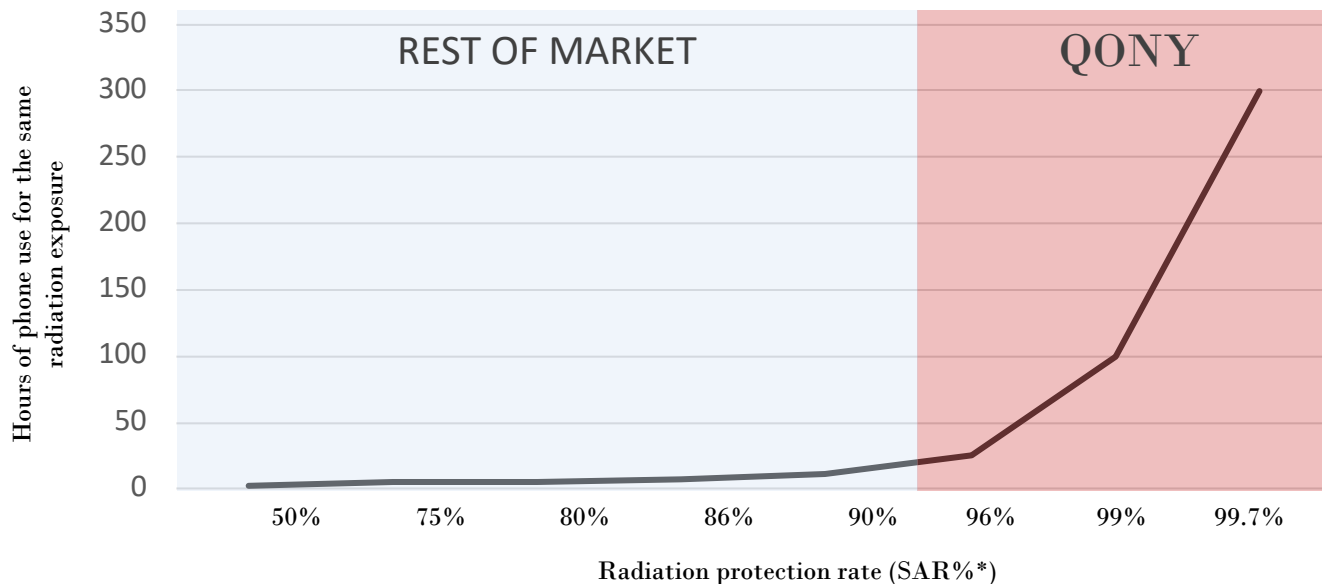

- Unlike other products on the market, QONY solution has been fully tested in the UK by one of the world's largest health and safety organisations TÜV SÜD using 3G and 4G equipment
- This testing has confirmed that across all 3 bands, the reduction of Specific Absorption Rate is up to 300 times (99.7%)

Explaining the science...

- The higher the % protection rate the more hours a phone can be used with the same radiation exposure:

- QONY offers a specific absorption rate up to 99.7% which means that someone can use their phone for 300 hours before they are exposed to the same level of radiation as they would have received without QONY

*SAR (Specific Absorption Rate) is the international norm that quantifies users' exposure to electromagnetic radiations.

QONY is currently available for 10 different mobile phone models

1. IPHONE XR
2. IPHONE XS
3. IPHONE X
4. IPHONE 8
5. IPHONE 7
6. IPHONE 6 / 6s
7. SAMSUNG - GALAXY S9
8. SAMSUNG - GALAXY S9 PLUS
9. SAMSUNG - GALAXY S8
10. SAMSUNG - GALAXY S8 PLUS

Summary... why take the risk?

- It is a known fact that mobile phones emit RF radiation which is absorbed by the human body with levels increasing as people use their phones for more and more time every day
- Whilst the harmful effects of this radiation is under research, all major health organisations and mobile phone manufacturers provide guidance on how to reduce exposure to RF radiation
- Around a third of users are concerned about the negative effects of mobile phone radiation and are interested in purchasing a solution to help protect themselves
- QONY is the only solution in the market that has been officially tested to reduce SAR level up to 300 times... so consumers no longer have to take the risk!
